### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Mathew Hall on January 31, 2008.

### **IN THE DRAWINGS**

The replacement drawing filed November 9, 2007 is NOT approved as the drawing contains subject matter that is not explicitly described in the specification. For example, the specification does not indicate that the bending device 6 is movable in two dimensional directions 11.

Applicant has agreed to submit a new drawing replacement where the dashed line 12 and the numeral 12 has been removed and showing only a one dimensional back and forth movement arrow for numeral 11. Upon submission of such a change, the correction will be permitted.

### **IN THE SPECIFICATION**

Replace the paragraph at page 3, line 11, with the following:

---However, as part of the present invention, the bending device is also intended to be movable with respect to a background, in particular with respect to the robot. The at least one bending device can preferably be controlled manually and/or mechanically so as to move back

and forth with respect to the robot on a cross slide, a track system, a linear system or the like in a ~~selectable~~ direction or along a ~~selectable~~ guide system with respect to the position of the robot, as indicated in dashed lines at ~~12~~ 11, ~~the corresponding position coordinates being transferred to the robot 3, as indicated in dashed lines at 13.---~~.

## REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: One reason for allowance is that the prior art of record does not show the claimed method *inter alia* where a robot arm grips a workpiece while feeding the workpiece continuously into the one positionally fixed bending device during bending.

While Ito (6,722,178) shows that the workpiece 40 is fed to a bending device 48, 50 and gripped by a robot 10 while the workpiece 40 is bent, Ito does not teach that the robot grips the workpiece while feeding the workpiece into the bending device during bending. In Ito, no feeding of the workpiece occurs during bending as the bending press bends the workpiece while the workpiece is stationary.

Similarly, Torvinen (6,474,131) shows that the workpiece 100 is gripped by the robot 1 while the workpiece is bent with the workpiece being maintained in a non-feeding manner to the bending press 101, 102 (see Figure 4).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
